Notes...

- It is better to install ardity from git (download and import it as a custom package from assets tab) and not from asset store.
- On my PC it has some problems with COM ports but on the notebook(13) worked pretty well.
- Main git repo is --- > HERE
- Guide to setup a project --- > HERE
- LED on/off Tutorial ---> HERE

Check if setup is correct ---> Basics/arduino-to-unity.ino
LED on and off by pressing keyboard ---> Basics/led-on-off.ino
